◇ Gilroy, CA

iampj2002@gmail.com ◇ <https://github.com/ItsPJ08>

PROFESSIONAL SUMMARY

Full-stack developer with hands-on experience building and deploying web and mobile applications using React Native, Spring Boot, Node.js, and PostgreSQL. Implemented production-grade authentication systems (OAuth, JWT, bcrypt) and RESTful APIs across three end-to-end projects. Completed a B.S. in Computer Science at CSUMB with coursework in Software Engineering, Operating Systems, and Computer Networks.

EDUCATION

Bachelor of Science, Computer Science, California State University, Monterey Bay

May 2026

Cumulative GPA: 3.5

Relevant Coursework: Software Engineering, Operating Systems, Computer Database Design, Software Design, Cybersecurity, Algorithm Analysis, Computer Architecture, Discrete Mathematics, Computer Networks, and Web Development,

SKILLS

Languages:	C++, Java, Python, Javascript, SQL
Web & Mobile Frameworks:	React, React Native/Expo, Node.js, Express.js, Spring Boot, Flask
Databases:	PostgreSQL, MySQL, Supabase, Firebase
Cloud & Deployment:	Heroku, Supabase Cloud
Developer Tools:	Git, GitHub, Docker, VS Code, Android Studio, Postman, PgAdmin, WordPress

EXPERIENCE

DigitalNest — Associate Software Developer

August 2026 - Present

Develop and maintain full-stack applications using React, Node.js, WordPress and SQL, building software solutions for external clients and internal Digital NEST projects.

Implement, test, and debug application features while collaborating with designers and project stakeholders to deliver responsive, maintainable solutions based on client requirements.

PROJECTS

GroupMeet — React, Spring Boot, Supabase, Heroku [GitHub](#)

- Architected Google OAuth + JWT authentication with Spring Security, securing all API routes and user sessions across a full React Native and Spring Boot stack.
- Designed a RESTful API layer supporting group creation, event scheduling, and CRUD-based participation workflows — enabling multi-user coordination at scale.
- Built end-to-end token flow between React Native frontend and Spring Boot backend, handling secure storage and authenticated request lifecycle.

TheMovieWiki — Node.js, Express.js, MySQL, TMDB API [GitHub](#)

- Built a full authentication system using bcrypt password hashing and session management, protecting user accounts and gating review and profile functionality.
- Developed backend API routes and relational MySQL queries powering user reviews, movie interactions, and profile management with Express.js.
- Integrated the TMDB API to surface live movie data (posters, descriptions, release info), replacing static content with real-time results.
